He has been with the company since 1989.**

Hymer Motorhomes

Always an original

For generations of holidaymakers, Hymer is the epitome of holidaying on wheels. And there is a good reason for this: Since the invention of the motorhome by Erwin Hymer in 1961, our vehicles have set standards and affect developments in this area of industry. Whatever class you are searching in: at Hymer you will always find the original.

We use this edge to offer you more – more choice, more comfort, more safety. Anyone who has been on the road in a Hymer motorhome will appreciate the difference. The thing that makes travelling a unique adventure here is the diversity of high quality details. And more than 50 years of experience that we draw upon to bring these details for you into perfect harmony.

You can gain a particularly good impression of this from the **new model year.** In the second half of this brochure you can find a detailed overview of the main equipment features, accompanied in each case by images and an explanation. This way, you can get to know the model series of your choice even better.

Of course, a description is no substitute for first-hand experience of the original. You should therefore take advantage of the opportunity at your Hymer trading partner to carefully look around your dream vehicle and, better still, take it for a test drive. Our close-knit dealer and service network in Germany and Europe provides you with the assurance that there is always first-class support nearby.

A general overview of the Hymer model series can be seen on the next double page. Here, you can compare the basic features of our motorhomes easily and conveniently – as an initial orientation aid to determine which vehicles best match your individual requirements. Further information about all available floor layouts and equipment versions can be obtained as always from your Hymer trading partner or www.hymer.com. You can also order the latest catalogues from there for all of the models.

If, in addition, you are among the growing number of Facebook users, we would be delighted to hear about your journeys and experiences at www.facebook.com/hymerAG. Many of our customers contribute to this site on a regular basis and make it a lively and informative place to visit. You can find valuable tips covering the whole spectrum of holidaying on wheels with the original. Experience them yourself: the mobile homes from Hymer.

"For us, the name Hymer is a bond. And for our customers a promise. These motorhomes offer the best performance and the best quality in any vehicle category."

Bernhard Kibler

Easygoing pleasure – with one star more

Hymermobil StarLight

More comfort, more space, more safety: The Hymermobil StarLight, on a Mercedes-Benz platform, combines these assets with ease. No expense spared in this new, exclusive model series – just weight. Enjoy the easygoing mobile pleasure of a "B Class with star", which stays capably below 3.5 tons.

The Hymer lightweight design and well insulated GFK floor make it possible for opposites to unite. An outstanding amount of space and standard equipment with many additional highlights on one hand and a surprisingly low overall weight on the other. With the Hymermobil StarLight, a motorhome model has been created whose unique profile unveils completely new areas of freedom.

Like being behind the wheel of a car, no weight-related restrictions in road traffic, unparalleled in this category as the only vehicle of its kind. The 163 HP Mercedes-Benz turbo-diesel also delivers the right amount of power to the wheels – punchy, majestic and quiet. For even more dynamism, a 190 HP engine with automatic torque converter transmission is offered as an alternative. The high level of driving comfort in the Hymer StarLight is supported in addition by its rear-wheel drive. It has this to thank for its excellent hill climbing capability and optimal traction, even under full load. Moreover, the intelligent electronic safety systems support you in critical situations with controlled braking and acceleration.

Freedom and independence is maintained in your StarLight, with no interruption of services, even over long journeys. Energy-saving LED technology and large tanks for up to 170 litres of fresh water and 140 litres of grey water equate to a large range that you can extend even further with the optional 100 litre fuel tank. There is also plenty of stowage space available for your holiday clothes and any equipment you need – in the numerous rear-ventilated roof storage cupboards, among other places. And the optional jumbo refrigerator has a capacity of 160 litres to keep you stocked up with supplies for many days.

With a choice of three different floor layouts, the Hymermobil StarLight offers sleeping and seating space for four people. The 575 model with opposing bench seats, classy queen-size bed and warm "Trentino pearwood" furniture finish stands out in particular. The 585 and 595 floor layouts with classic L-shaped bench seat make it possible to choose either two large single beds or one double bed in the rear. The latter is combined

> **"Driving comfort from Mercedes-Benz and living comfort from Hymer, combined in motorhomes of the sub 3.5 ton category this is a truly a unique experience."**
>
> **Rainer Wingart, Product Manager**

with a vehicle length of under seven metres. At the front, all vehicles also feature a 1.50 metre wide drop-down bed that lowers right down and sits securely on a base.

All beds are equipped with high quality multi-zone cold foam mattresses – one of many exclusive equipment features that are included onboard the Hymermobil StarLight as standard. Other examples are the luxury rotating table with real wood frame, the night light, reading lamps in the living and sleeping area and also the comprehensive radio and TV preparation. Details such as these contribute in a large way towards the enhanced standard of comfort in this model series.

The tangibly high level of living comfort begins with a pleasant atmosphere. Here, the 6000 watt Truma heater and its

Generous feeling of space: The 4-person layout of the Hymermobil StarLight offers the highest level of openness and freedom of movement. As an alternative to the classic L-shaped seating group – as seen here in the StarLight 585 – there is also the option of a floor layout with opposing bench seats. Seen here with "Trentino pearwood" furniture finish.

numerous hot air outlets throughout the interior ensure an evenly balanced, cosy temperature: from the hot air curtain above the instrument panel to the heater ducts all around the rear beds. If desired, the system can also be replaced by a particularly comfortable ALDE hot water heater. The unique, fully foamed Hymer PUAL wall structure and the high quality framed windows guarantee first class heat insulation with no drafts or cold bridges. The air humidity is regulated by the breathable interior walls. In this way, a genuine pleasant atmosphere prevails both in summer and in winter.

Protected by the warmth are also the water tanks and the entire onboard installation. They are housed in insulated underfloor trays and are thereby protected in the winter. Beneath, any influence from bad weather, salt or stonechips is warded off by the indestructible GFK underbody. This assures that you can enjoy your Hymermobil StarLight throughout its service life – bountiful pleasure and easygoing. »

"It goes without saying that a Hymermobil StarLight is winterised. Heating comfort, driving safety and frost-protected installations – everything fits in well here."

Thomas Buschle, Technical Development Construction

"The version with opposing bench seats has charm. They open the space to the rear and create more space there."

Frank Venter, Head of Design

Hymermobil StarLight – Living comfort

Hymermobil StarLight – Inside temperature

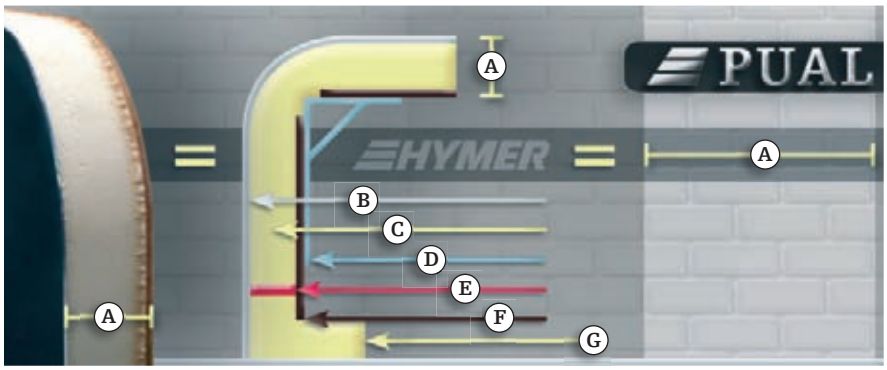

Warmly recommended to all

Perfect heat insulation, cleverly conceived heating and "breathable" interior walls that capture moisture and release it again – in the Hymermobil StarLight, a cosy and healthy atmosphere is assured all year round. Frost-protected installations also mean these vehicles are winterised.

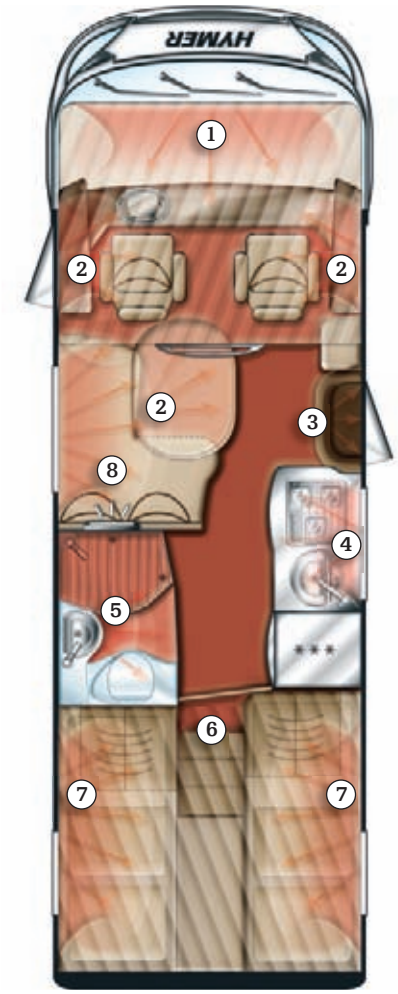

Insulated and heated underbody:
The floor conceals the fresh water (A) and grey water tank (B) in insulated trays (C), which have hot air flowing through them (D).

All of the installations (E) are in a heated area of the living space, protected against frost.

Unique Hymer-PUAL wall structure:
Just 3.5 centimetres thick but the PUAL wall in the Hymermobil has the insulating effect of an 80 cm brick wall (A). The fine pored polyurethane foam (B) is joined completely to the sturdy aluminium outer skin (C) and the breathable plywood layer (D) inside the vehicle.

The prevents cold bridges and ensures a very high level of stability - likewise provided by the plastic corner profile surround (E) and the full elastic bond (F) to the vehicle roof. The foam-filled GFK floor (G) rounds off the heat protection.

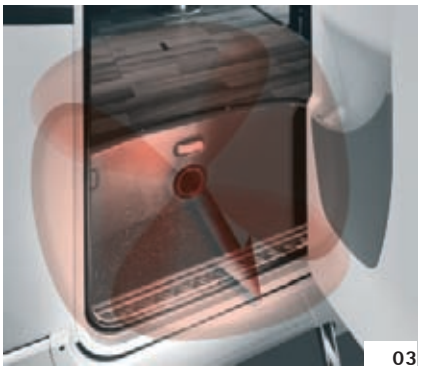

Comfortable, well-balanced heat distribution:
The numerous, optimally positioned hot air outlets guarantee a perfectly cosy climate throughout the vehicle and also heat the water tanks and installation.

01

Instrument panel:
Blower on the windscreen

Travelling under a good star

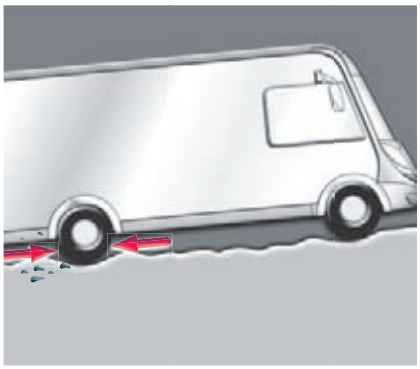

With the Hymermobil StarLight, the level of road safety is higher than it has ever been. It brings together the high road safety standards from Hymer and Mercedes-Benz: with best visibility and the most modern electronic safety systems that support you vitally in critical situations.

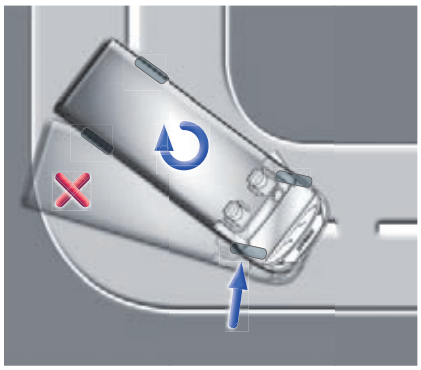

Optimal weight distribution:
The vehicle's centre points of gravity are positioned to promote safe road handling.
The fresh water tank (A) and grey water tank (B) are located over the rear axle, the engine (C) is located over the front axle.
The weight is thereby evenly distributed (D).

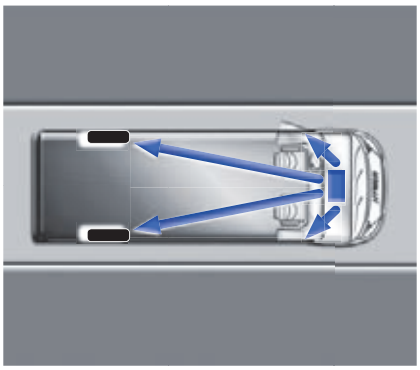

Driver and front passenger airbag:
Both seats in the cab are equipped as standard with Mercedes-Benz airbags.
In the event of an accident they are triggered in a fraction of a second and prevent severe head injuries. If an airbag is triggered, the seat belt is tensioned at the same time.

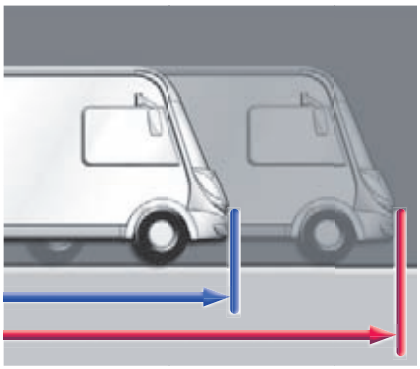

Anti-skid regulation (ASR):
If traction is lost at a wheel (wheel slip), this is detected by the electronics and the wheel is braked automatically. This makes it much easier to drive off and accelerate on slippery surfaces and the vehicle is prevented from sliding sideways at the rear.

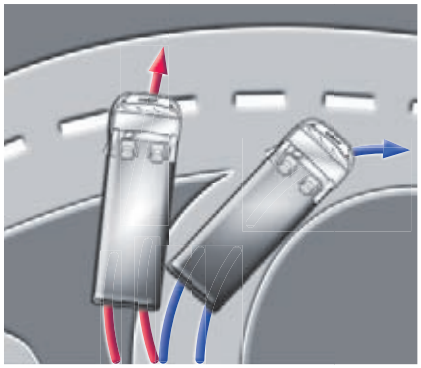

Electronic stability program (ESP):
In critical situations, skidding or breaking out of the vehicle is prevented by engine speed adjustment and by targeted braking of individual wheels.
When doing this, "Adaptive ESP" takes account of the respective load status.

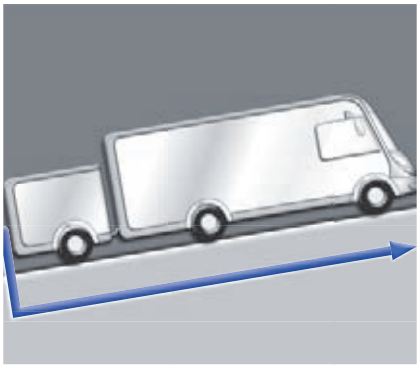

Electronic brake force distribution (EBV):
This system apportions the brake force optimally to both axles depending on the situation.
In this way, the greatest possible braking force is achieved and, at the same time, the vehicle is prevented from breaking out through "overbraking" at the rear axle.

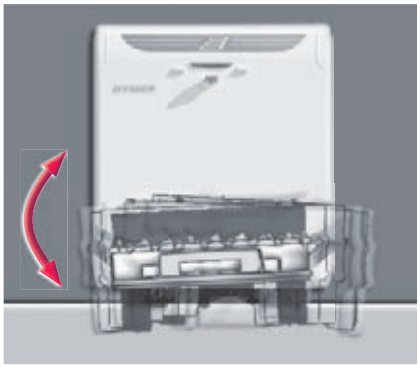

Brake assist system (BAS):
Every metre counts in an emergency braking situation. The electronics detect emergency situations such as these by the speed at which the brake pedal is pressed, whereupon brake pressure is increased. Thanks to the ABS, the wheels are kept from blocking.

Anti-lock braking system (ABS):
Now somewhat of a classic among electronic control systems, this system prevents the wheels from blocking during emergency braking and, in this way, keeps the vehicle steerable. Familiar, light pulsation at the brake pedal can be detected during ABS intervention.

Hillholder (AAS):
On gradients, the brake pressure remains intact for a short while after the brake pedal has been released. In this way, any undesired rolling back of the vehicle is prevented and the vehicle can be driven off with particular ease. The hillholder or drive-off assistant is active on gradients from about 4 %.

ESP trailer stabilisation:
This system brakes the towing vehicle in a targeted manner if the trailer begins to weave too heavily.
To prevent the trailer from swaying, the brake interventions become continually stronger until the motion is stabilised.

Good view behind:
The large, heated exterior mirrors are colour coded and optimally positioned. They can also be adjusted comfortably by electrical means from the driver's seat. Thanks to the wide angle mirrors on both sides there is no blind spot next to the vehicle.

Perfect all-round vision:
The high panoramic front window and the large side windows in the cab really open up the view in all directions. Moreover, the area right in front of the vehicle is also clear to see from the driver's seat thanks to the lowered instrument panel. This unhindered all-round view creates not just a unique impression of "open plan" driving. At the same time, is also provides maximum overview and safety. The electric adjustable exterior mirrors and the optional reversing camera serve as a perfect supplement to this.

Daytime running lights as standard:
See and be seen is important in equal amounts when travelling by road. The daytime running lights are therefore a standard feature of the Hymer headlights. For unimpeded travel in countries where day driving lights are already compulsory.

Best vision in any weather:
The 3-arm windscreen wiper system on the panoramic front window ensures that the road can be seen even during heavy downfall. Thanks to the large, wide wiping range, edges of the road and crossroads can also be seen well. Every Hymermobil built in almost two decades to date can be identified by the three parallel wiper arm design, which has been continually optimised during this time. Independent tests confirm its outstanding effect and the good field of view from Hymer.

Illustrations for example only. Changes possible.

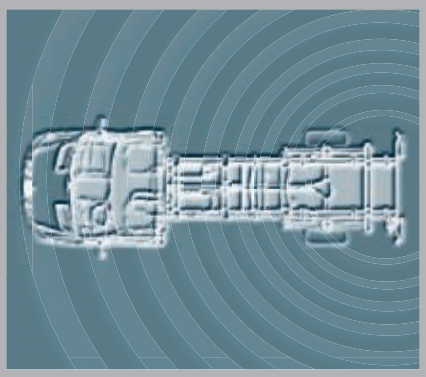

Hymermobil StarLight – Highlights from series production

Exclusivity made easy

Despite its low overall weight, the Hymermobil StarLight features a wide range of exclusive equipment as standard. You can enjoy the highest level of comfort here, embedded in top class technology. Just the way you'd expect from a star-adorned vehicle.

Top performance:
With 120 kW / 163 HP, the 4-cylinder diesel engine from Mercedes-Benz offers a powerful driving experience with high elasticity. A two-stage turbocharger ensures smooth acceleration with no turbo lag. The engine meets emissions standards Euro 5 and EEV.

Excellent road handling:
Even under full load, the Mercedes-Benz rear-wheel drive guarantees very good climbing power and optimal traction as the weight of the body is balanced over the drive axle. At the same time, handling is improved thanks to a tighter turning circle.

Calm driving and living comfort:
The high quality fabric trim on the ceiling (A) and on the underside of the pull-down bed (B) enable pleasant acoustics. Even the flock-finished instrument panel and the noise insulated driver door contribute towards a genuine feel-good atmosphere in the cab.

Access without barriers:
The engine compartment beneath the windscreen is easy to open and provides a large access area. This makes it convenient to check and replenish the oil, coolant and windscreen washer fluid. The lamps of the headlights are also easy to access and can be replaced extremely easily.

More light on the road:
Two bright LED reading lamps supply the cab if required with good lighting during a journey. The spotlights integrated in the furniture are attached to the underside of the pull-down bed and can be switched on from the driver and front passenger seat with ease.

Best guard against dazzling light:
For a safe journey even when the sun is low in the sky, both seats in the cab are equipped with flexible sun visors. The visors attached to the pull-down bed can be adjusted for any sunlight intensity via two pivot points.

Discover even more highlights at a Hymer trading partner near you.

Perfect thermal protection:
The full foam, completely bonded PUAL wall structure provides a cosy living environment without cold bridges. With a thickness of just 3.5 cm, the Hymer PUAL technology, not found anywhere else in the world, achieves the same insulation performance as an 80 cm thick brick wall.

Permanent protection from underneath:
With its indestructible GFK underbody, the vehicles are practically immune from weather-related damage. Even stone-chips, grit and dirt are kept at bay by the underbody – a secure foundation for the entire service life of the motorhome.

Thermal protection in cab:
As in the living space, the best insulation properties are assured right at the front of the vehicle. The double skin GFK front-end, filled in between with a PU foam thermal insulation layer, ensures that cold is kept at bay in the front area of the motorhome.

View without cold bridges:
The high quality Seitz S7 window frames are equipped with double acrylic glazing – for optimal thermal insulation. The powder-coated aluminium frame is particularly lightweight and sturdy and also features an insulation layer to protect against cold bridges.

Helpful exterior light:
The powerful LED awning light with rainwater deflector is already part of the standard equipment.
It illuminates a wide area outside the entry door, thereby making it safe to alight the vehicle in the dark.

No chance of moisture:
All of the vehicle doors and also all of the exterior stowage compartment flaps and doors are protected against rain and spray water by additional spray water seals. This means that there is no chance of water ingress between the door and frame and nothing will freeze shut in the cold.

Illustrations for example only. Changes possible.

Hymermobil StarLight – Highlights from series production

Attractive living space:
The spacious lounge seating group around the luxury table with flexible adjustment is not just inviting and comfortable at first glance. High quality seat padding and upholstery fabric turn it into a hangout area and meeting point with an all-round inviting feeling.

Always in the right position:
The luxury table with real wood frame can be adjusted in longitudinal and lateral directions and also rotated about its own axis by 360 degrees. In this way, it can be reached from any point and in any situation optimally – and is never in the way.

Undisturbed privacy:
To blackout the front of the vehicle, the Hymermobil has concertina blinds all around the cab area. The high quality curtain material and the colour coded curtain rail create a warm living room atmosphere – and keep nosy glances at bay.

A place for shoes:
Right next to the entry door there is a practical stowage flap. It can be accessed conveniently from the entry area and is ideal for comfortably changing in and out of shoes when climbing aboard and alighting the vehicle.

Brightness at day and night:
The large crank skylight in the living space lets in lots of daylight directly and creates a pleasant, natural ambience in the interior of the vehicle. At night, the integrated LED spotlights provide a good spread of light.

Unwanted guests stay outside:
Want to enjoy a nice summer's evening with the door open or air the motorhome? No problem. The integrated mosquito net door in the entry area keeps all unwanted winged guests from entering the interior

High lighting output, low power consumption:
An illuminated surround canopy provides excellent, well balanced lighting both in the living area and the rear sleeping area. Thanks to energy-saving LED technology, the power consumption is low despite a high lighting output.

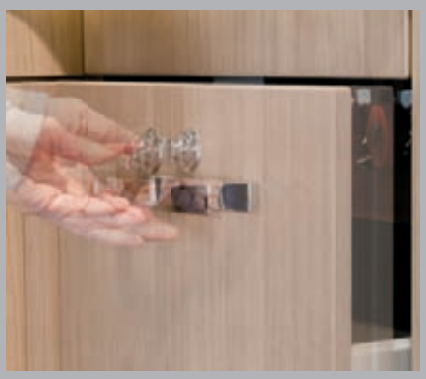

Night guidance:
The night lighting in the skirting boards aids orientation in the motorhome without waking up fellow travellers with bright light – for example when visiting the toilet at night. The discreet LED spotlights can be switched on and off conveniently from all bed spaces.

Discover even more highlights at a Hymer trading partner near you.

Kitchen comfort like at home:
Large drawers in the lower kitchen cabinet, which can be partitioned freely, offer maximum stowage space for cutlery and cooking utensils, provisions and lots more. They can be pulled out quite far and allow convenient and easy access to all of the equipment stored there.

Safe, convenient handling:
All of the kitchen drawers have roller bearings and glide particularly well. They feature a high quality Servo-Soft closing feature and one-handed push-locks that prevent the drawers from opening and rattling when the vehicle is in motion.

Cooking is fun this way:
Several large pots find space on the 3-flame cooker with electric ignition. The split folding glass cover serves as an additional work surface if required. The sturdy, fold-up grate and the removable knobs make cleaning child's play.

Washing up with plenty of elbow room:
The extra deep sink not only offers more space for washing salad and vegetables. Thanks to the high tap, large pots and utensils can also be washed without trouble. Tall receptacles can likewise be filled comfortably.

Brightly lit work surface:
The head-chef lighting above the worktop provides optimal lighting conditions in the kitchen. With its three recessed LED spotlights in the roof stowage compartment, it lights up the whole surface perfectly – with clear visibility of the cooking pots.

Washing and cutting included:
The cleverly designed kitchen has no dead space: With a turn of the hand, the fitted sink cover converts the sink into a practical chopping board for freshly washed vegetables.

Integrated refuse bin:
A perfect solution for kitchen waste is also onboard. A refuse bin directly under the sink offers space for all of the waste products from cooking. With its pivoting handle, it can be removed and emptied easily.

Kitchen wipes always at hand:
In the floor layout with side kitchen, the high refrigerator is connected to the work surface. Installed here above the sink is a practical wall shelving unit with kitchen roll holder. This leaves more free space on the worktop.

Water-tight design:
All of the connecting joints in the kitchen area are sealed effectively with sealing tape and end strips. This means that the whole surface can be wiped down wet with no worries – and a few little splashes when cooking and washing up are really nothing to worry about.

Illustrations for example only. Changes possible.

Hymermobil StarLight – Highlights from series production

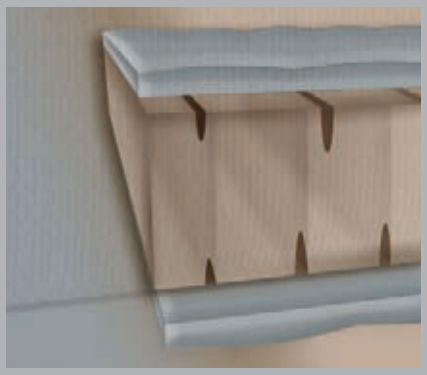

A place for everything:
The large, easy to reach roof stowage cupboards above the kitchen are ideally suited for the storage of crockery and other tableware. Even if the motorhome is fully loaded, there is plenty of space here to cater for all of the passengers and guests.

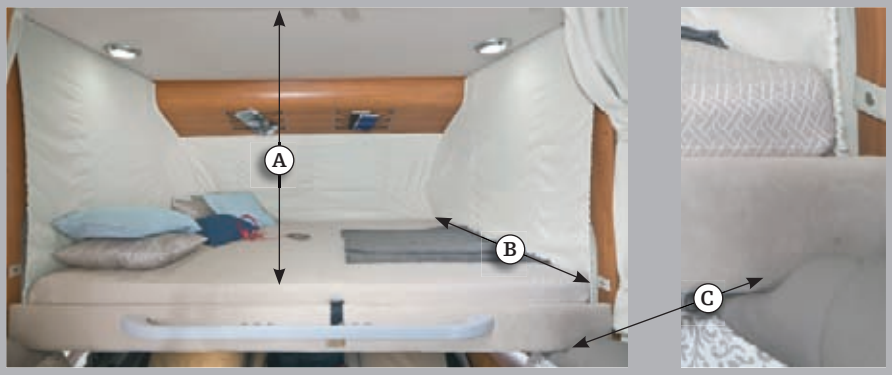

Pleasant seating height in bed:
In approximately three metre high vehicles there is plenty of room above the rear beds to sit up comfortably. Climbing in and out of bed is thereby made particularly easy – there is no need to duck your head here.

Huge slumber island:
The large single beds in the rear can be joined together at the turn of a hand to create a complete sleeping space. Simply bring the pull-out ladder between the beds into position, place the additional padding on top and hey presto!

The highest level of sleeping comfort and a healthy sleep:
All of the beds are equipped with high quality multi-zone cold foam mattresses that support each area of the body accordingly. Breathable mattress toppers in the rear assure good ventilation.

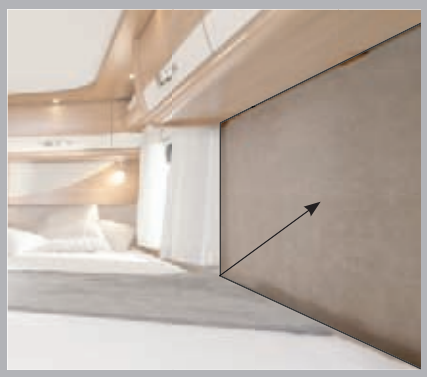

Greater sleeping comfort in the front:
The pull-down bed above the cab also offers maximum freedom of movement and head clearance (A). Its comfortable sleeping area can be used fully without restriction over the whole width of 1.50 metres (B) – even in the front area of the vehicle. In addition to these generous dimensions, the solid mounting of the pull-down bed also contributes towards its high standard of comfort. In lowered state, the bed rests positively and securely at the head and foot end (C). This makes it easy to climb into bed and is the assurance of an undisturbed and peaceful sleep.

Lights on for a night-time read:
At the head of every bed there is an adjustable reading lamp with LED light. The pull-down bed at the front is fitted with spotlights at both ends so that the sleeping direction can be changed if needed, e.g. if the vehicle is slightly slanted.

More headroom in sleeping area:
Mosquito nets and blackout blinds are fully integrated in the frame of the large clear glass skylights (40 x 40 cm) above the rear beds. In this way, the skylights barely encroach on the interior and permit the full standing height.

Cosy bedroom atmosphere:
All of the walls in the sleeping area are equipped with a high quality microfibre coating. This soft surface creates a friendly and warm atmosphere and pleasant ambient sound. It can be cleaned easily if needed.

Discover even more highlights at a Hymer trading partner near you.

Into bed safely and comfortably:
Fixed steps with an extra large surface lead to the beds in the rear.
They make it safe and comfortable to climb in and out of bed even in a sleepy state –
such as a late night visit to the toilet.

Everything within reach:
There are plenty of stowage compartments and shelves directly on the bed so that glasses, books and drinks are always within reach, even at night. They remain within easy reach even if the single beds in the rear are connected together to form a slumber island.

Lots of stowage space above the beds:
On the backwall and at the foot end of the beds there are large, deep roof storage cupboards, which offer an additional means of storage, e.g. for clothing. This utilises the "air space" above the beds optimally without limiting freedom of movement.

Well stowed away in washroom:
Spacious washroom cabinets with lots of stowage space make it easy to store all of the utensils required, while keeping them in reach. Small and sensitive items are protected reliably by standard securing straps in the shelves and stay this way when the vehicle is in motion.

Optimal drainage guaranteed:
All of the shower trays are equipped with two opposing drain holes.
In this way, the shower water can also flow away quickly and without restriction if the vehicle is parked on uneven ground or on a gradient.

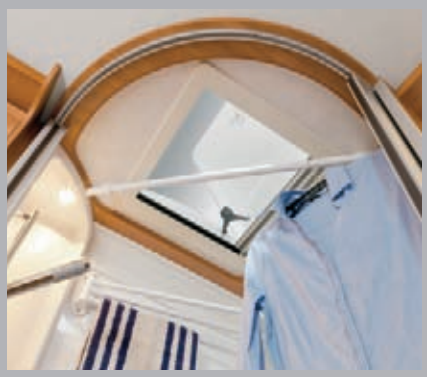

Hand wash without wet feet:
The spacious and comfortable washroom has a separate shower cubicle with fixed walls and its own standing space in front of the washbasin.
The wide, high quality bench toilet is particularly comfortable and easy to clean.

Leak-tight installation:
The shower tray and shower walls are connected to each other through a shell design so that water cannot escape through the joints. Thanks to this leak-tight construction, the use of silicon for sealing purposes was reduced to a minimum.

Almost like real porcelain:
The high quality washbasins made from classy "cool glass" are attractive, extremely sturdy and durable. As far as looks and feel are concerned, it is very similar to porcelain. Unlike conventional washbasins, scratches and damage can simply be polished out.

For drying, airing and storage:
The sturdy, fold-out clothes rail in the shower is ideal for drying wet clothing without taking up too much space.
If required, it can also be used as additional storage space for holiday attire – or simply for airing clothes.

Illustrations for example only. Changes possible.

Hymermobil StarLight – Highlights from series production

Toilet emptying made easy:
With its easy to read electronic fill level indicator, the Thetford toilet shows exactly when the black water tank needs to be emptied. The swivel drain point of the tank makes emptying easy and secure, even in tight spaces.

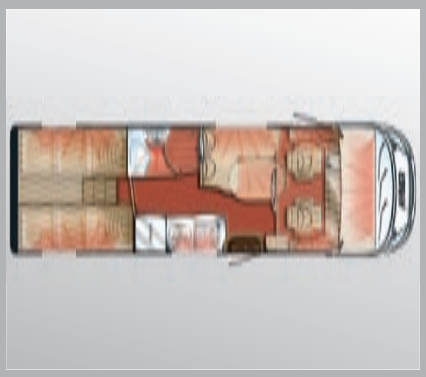

Well aired, well protected:
Large frosted glass skylights (40 x 40 cm) in the washroom and shower cubicle uphold privacy and allow water vapour and steam to escape quickly. Mosquito nets and blackout blinds are integrated in the flat frame, meaning standing height is not impaired.

High heating power included:
With 6.000 watts of power, the Truma Combi 6 heater, installed as standard, has no trouble bringing the temperature inside the vehicle up to a cosy level even when it is freezing outside. Thanks to its central location under the seating group, the heat is distributed optimally throughout the vehicle.

Hot air curtain against windscreen:
Even the fan above the instrument panel is part of the living space heating programme. The hot air rises against the windscreen here like a curtain and keeps backs warm when the driver and co-driver seats are turned around.

Perfectly cosy throughout:
The numerous hot air vents inside the vehicle and in the exterior stowage compartments are positioned precisely so that an optimal heat distribution is achieved. Every model series is repeatedly tested and perfected in the cold chamber for this purpose.

Backwall circulation against condensation:
All of the roof storage cupboards have a void at the back through which warm air can circulate unhindered. In this way, high temperature changes in the interior and undesired condensation can be avoided.

Energy-saving LED lights:
The interior lighting throughout the vehicle features LED technology as standard. This saves 3/4 of the energy and increases the service life of the battery by numerous hours. Since LEDs do not become hot, fire and accident safety is also enhanced.

Prepared for radio and TV:
Loudspeakers in the sleeping area and living space, wiring and a socket and also a radio aerial are factory fitted items in every vehicle. All that is needed is for a radio and/ or television to be plugged in.

Spectacular sound out of sight:
The flat loudspeakers installed in the rear are integrated covertly in the side panels. They deliver a pleasant and spectacular sound in the sleeping area – without taking up any space and without affecting the appearance of the bedroom.

Discover even more highlights at a Hymer trading partner near you.

Easily accessible drain valves:
The whole supply installation system is designed so that all units are protected in the best way but still have easy access.

Electric grey water drainage tap:
Drainage of the grey water tank can be controlled conveniently at the press of a button. The tank features an electric valve that can be opened and closed simply via the switch located on the side in the rear garage.

Direct access to the tank:
Checking and cleaning the grey water tank is also especially easy and convenient. The cover of the tank is located directly beneath the floor flap and can be accessed with ease from the interior.

Clear route to fresh water:
Likewise in the interior of the vehicle under an additional floor flap is the access point to the fresh water tank. The rotary knob to open and close the overflow has a central location and the large flap is ergonomically formed.

Practical trip switch:
Unlike the central power supply unit, the trip switch is not located in the double floor but in the wardrobe where it can be reached comfortably. In this way, power can be restored quickly should the switch be tripped.

Vehicle services at a glance:
The fresh water and grey water levels, the battery voltage, the load at the 230 V sockets and additional data readings can be taken from the well laid out control panel above the entry door. This means that the current service levels are always in check.

Illustrations for example only. Changes possible.

Hymermobil StarLight – Highlights from series production

Plenty of sockets for appliances:
With four 230 volt and two 12 volt sockets, there are numerous means of connection. In the seating group, washroom and kitchen, 230 volt appliances can be connected, while 12 volt devices can be connected at the TV point and in the instrument panel.

Parking for bulky and heavy items:
In the huge rear garage there is plenty of space for bikes placed side-by-side. Even scooters or heavy, bulky items of luggage can be stowed here optimally – up to a maximum permissible load of 250 kilograms.

Safe and secure from outside:
All of the exterior stowage compartments feature sturdy, ergonomic rotary knobs that ensure optimal closing security. The first 180 degree turn closes the door and an additional 180 degree turn presses the door into the frame with a tight and flush fit.

Fold up and pack away:
Beneath the central lounge bench seat there is an additional large stowage space, which can be opened by folding up the seat padding. The integrated fabric hinges make opening and closing especially easy and convenient.

Maximum storage space under the roof:
Throughout the vehicle, a large number of extra deep roof storage cupboards provide plenty of space for holiday clothing, utensils and luggage. Thanks to their sturdy self-supporting design, they are also well suited for heavier items.

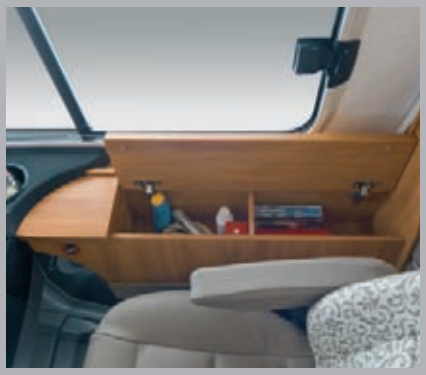

Cubby-hole opportunities:
Under the roof storage cupboards, spacious cubby-holes serve as an additional means of stowage – both in a decorative as well as a practical sense.
A neatly integrated rail prevents items from falling out when the vehicle is in motion.

Discover even more highlights at a Hymer trading partner near you.

Within easy reach at night:
Numerous stowage compartments and cubby-holes can also be found on the rear beds. Spectacles, books and drinks can be stowed here within easy reach, right next to the pillow end. This means that there is no need to fumble around and everything is always easy to find when getting up in the night.

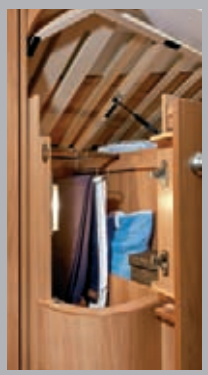

Stowage space for co-driver:
For maps, books and everything that is needed for the journey, a spacious sideboard in the co-driver's door offers adequate means of storage.
It has a high quality wood finish and can be used as a practical shelf when closed.

Scope for head cooks:
Thanks to its generous pull-out drawers, the large kitchen cupboard under the worktop can be used to its full extent for food supplies and kitchen accessories. The spacious drawers can be divided flexibly so that items of any size can be stowed optimally.

Lots of space for holiday clothing:
In the spacious wardrobes of the motorhome, lots of clothing can be hung up or folded away. In addition to the wardrobe under the rear beds, most of the floor layouts feature a flexible high cabinet.

Flexibility off the rail:
The high cabinets of the Hymer motorhomes can be adapted to individual requirements thanks to the adjustable shelves (B).
One of the shelves features an additional clothing rail (A), which means that garments can be hung up on two levels.

Hymermobil StarLight – Special equipment

Desires made real

Star catcher, not falling stars: In the Hymermobil StarLight, you can include your own personal equipment options. A small selection of the options available can be seen here. A comprehensive overview is available from your Hymer trading partner.

Enhanced driving dynamics:
With 140 kW / 190 HP, the 6-cylinder diesel engine from Mercedes-Benz develops even more power – ideal for easy acceleration and climbing mountains.
As with the 4-cylinder unit, it complies with exhaust emissions standards Euro 5 and EEV.

Even smoother shifting comfort:
With the new, consumption-optimised 7-speed torque converter automatic from Mercedes-Benz, gear changes are barely noticeable. The difference compared with the standard version is noticeably comfortable, particularly on gradients.

Greater protection against burglary:
Both the driver door and the door to living space can be supplied on request with reinforced locks, designed to offer added security. With this supplement, the vehicle and its contents are much better protected against unwanted visitors.

Darkness at the press of a button:
The electric roller blinds of the windscreen darken the cab area in a pleasant way.
As an additional guard against cold and direct sunlight it also contributes towards a cosy atmosphere all year round

Heating with hot water:
As a high quality alternative to hot air heating, the ALDE hot water heating system delivers particularly comfortable warmth with its diverse convectors - at the instrument panel as well.
If desired, the system can be ordered with an energy-saving heat exchanger.

Fresh air guaranteed:
The powerful "Fantastic Vent" electric roof fan above the kitchen ensures that steam and kitchen odours are kept at bay.
This means that the air inside the vehicle stays nice and fresh – even if the outside temperature is not particularly inviting.

Discover even more highlights at a Hymer trading partner near you.

Sit in comfort in the shower:
As an equipment option for all Hymer open washroom showers, the integrated folding wooden seat offers the chance to sit down and rest and also provides an opportunity to store utensils. It has the same design as the slatted wooden frame and is simply folded up when not in use.

Electric drop-down bed:
The 1.50 metre wide drop-down bed above the cab can be raised and lowered electrically with no effort whatsoever. The switch for the jolt-free electric drive is integrated on the front of the bed and can be reached from the living space with ease.

Clear view to the sky:
The optional skylight (40 x 40 cm) above the drop-down bed means that sleepers can be gently woken by the sun in the morning. As with all other skylights, a mosquito net and blackout blind is also integrated here with a clever space saving design.

Drying-up superfluous:
With the perfectly sized drying rack, the washed crockery and cutlery items can simply be left in the sink - and they can even stay there when the vehicle is in motion. Furthermore, the draining board underneath means that the rack can be placed anywhere.

Daylight bright xenon light:
Optimal view in the dark is guaranteed by the very bright, highly efficient bi-xenon headlights with automatic headlight range control and integrated headlight washer system. They light up a particularly wide field of view with an illumination very similar to daylight.

High tech in the kitchen:
The tall TEC-Tower is a superlative item of modern kitchen equipment in the motorhome. It comprises a fridge freezer unit (160 litres), an oven and a grill in a timeless classy design and impresses not only in terms of looks but also as a versatile helper.

Safe travel in fog:
The optional fog lights are installed way down in the lower third of the front skirt and therefore emit a great amount of light in fog. They are available either in combination with static cornering lights or separately as a special equipment option.

Hard, level standing:
With the convenient corner stays at the rear of the vehicle, the motorhome can be stabilised when parked. This means that the sleeping area, in particular, is not prone to movement on the springs of the suspension. The corner stays can also compensate for slight unevenness of the ground.

Illustrations for example only. Changes possible.

Insulated glazing in the cab:
The double glazed windows in the driver door and on the co-driver side provide additional thermal protection if required.
They also prevent water running off the windows into the interior in the event of high condensation and they reduce driving noise.

More miles to the gallon:
With the extra large 100 litre fuel tank, which can be selected as an alternative to the standard tank, the next visit to the filling station is literally miles away. This represents a great saving in time, a greater range and greater independence.

Well in sight when manoeuvring:
The reversing camera captures the area behind the motorhome and transmits the image in full width to the 7 inch colour monitor in the cab. Its integrated heater guarantees clear view in winter in the event of ice and snow.

Ambient lighting to taste:
The versatile ambient lighting makes it possible to create the desired lighting effect in the vehicle at the press of a button.
Here, the LED lamps in the surround feature are included in the same way as the lighting in the kitchen.

Perfect audio experience:
Music lovers have a real treat in store with the Hilse Soundbox. As a digital sound processor (DSP) with integrated output stage (4 x 30 W), it prepares the audio signals for the loudspeakers installed in the cab, living space and rear optimally.

Pin-point support:
The Hymer comfort sleeping system with high quality disc-type bed frames go hand-in-hand with the multi-zone cold foam mattresses for optimal comfort. Each area of the body is supported with just the right amount of counter-pressure with pin-point accuracy – for a cosy, peaceful sleep.

Radio remote central locking:
If required, the doors of the vehicle can be locked and unlocked conveniently via the radio remote control on the key. When using the central locking, the motorhome also offers a coming home function with delayed headlight deactivation.

Driving comfort with cruise control:
Comfortable and safe at a steady, controlled speed – the onboard cruise control system makes this possible. If the set speed is exceeded, the integrated Speedtronic alerts the driver.

Air conditioning in cab:
The electronically controlled automatic temperature system assures a comfortable environment when the vehicle is in motion.

Practical aids:
The driver doors are equipped with electric window regulators and an automatic electric step.
The large, anti-slip surface makes boarding and alighting the vehicle particularly safe and convenient.

Highest level of leak-tightness:
The vehicle roof is made from sturdy aluminium and has no longitudinal seams through which water could ingress from above. As additional protection against weather and hailstones, a GFK coating serves to prevent mechanical damage to the surface of the roof.

Twice the safety:
The convenient entry door in the living space features a large window aperture with integrated blackout blind and a double lock. With its electric step, it makes climbing aboard and alighting the vehicle safe.

Note:

This brochure describes the series status at the time of publication. Some of the photos contain optional extras. Despite careful checking of the contents, printing errors are not excluded. During the course of the model year, we reserve the right to make changes to equipment or product improvements. Before entering into a sales contract, please find out from our authorised Hymer dealership about the current product and model status.
In some cases, the vehicles are illustrated with optional extras that are contained in the valid price list and for which additional payment is required. The decorations illustrated are not part of the Hymer scope of supply. The specifications concerning the scope of supply, appearance, performance, dimensions and weights of the vehicles – dimensions within the scope of factory tolerances (max +/– 5%) are possible and permitted – correspond to the state of knowledge valid at the time of printing. They comply with European homologation regulations; these regulations may change up to the time of vehicle purchase or up to the time of delivery. Your Hymer dealer will be delighted to inform you of any changes and about the standard scope of supply.
